

Science Objectives

1. Quarter 1: Earth Science

- Water on Earth moves between the oceans and land through the process of evaporation and condensation.
- Energy from the Sun heats Earth unevenly, causing air movements that result in changing weather patterns.

2. Quarter 2: Physical Science

- Elements and their combinations account for all the varied types of matter in the world.

3. Quarter 3: Life Science

- Plants and animals have structures for respiration, digestion, waste disposal, and transport of materials.

4. Quarter 4: Investigation and Experimentation

- Asking meaningful questions and conducting careful investigations make scientific progress. Students will develop their own question and follow through with the scientific method
