

Lesson 15a: Points, Rays, Segments, and Lines

Objective: Identify and label points, lines, line segments, and rays.

Complete in your journal.

Warm-up: Math Minute

Learn About It:

1. **Point** – an exact location in space.
2. **Line** – an endless straight path made up of a continuous collection of points.
3. **Line segment** – a part of a line and has two endpoints.
4. **Ray** – has one endpoint and extends without end in one direction.
5. **Plane** – a collection of points that forms a flat, continuous, and unending surface.
6. **Intersecting lines** – lines that have one point in common.
7. **Perpendicular lines** – lines that intersect at right angles.
8. **Parallel lines** – lines that lie in the same plane but do not intersect.
